1 = Only the Red Beacon switch functions, the White Beacon switch does not.

2 = The Beacon light automatically goes on when the engines are running.

3 = Production versions of this aircraft did not have a rotating beacon, so this interface declares this as INOP.

4 = The VC switch is two position only - use the lower "both" indicator to signal the FCDU.

5 = If the FSCaptain ENABLE\_DEFAULT\_IGNITION option is enabled and is running in FSX/P3D.

**A** = Aircraft Signal  
**I** = Interface  
**K** = Key Event  
**O** = INOP  
**?** =  
**??** = Unknown
