- 1 = Only the Red Beacon switch functions, the White Beacon switch does not.
- 2 = The Beacon light automatically goes on when the engines are running.
- 3 = Production versions of this aircraft did not have a rotating beacon, so this interface declares this as INOP.
- 4 = The VC switch is two position only - use the lower "both" indicator to signal the FCDU.
- 5 = If the FSCaptain ENABLE\_DEFAULT\_IGNITION option is enabled and is running in FSX/P3D.
- 6 = BEACON LT must be set to "BOTH".
- 7 = Uses Cabin Chime button, which only needs to be pressed ONCE.
- 8 = Exits cannot be controlled via FCDU; only monitored. You must use the aircraft's own systems for control.
- 9 = The Nav Light control must be on 'steady'. The 'strobe' setting sets and resets the Nav light value and your FO won't like it!

December 2017

All changes since the previous version are noted in red.
